WORK EXPERIENCE

Comporium, Inc. **Jan 2025 - Present**

Java/SQL Developer *Rock Hill, SC*

- Modernized and refactored Java Spring Boot project to be easier to debug and maintain.
- Led an effort to implement Fiber Provisioning for two ONT manufacturers in an application that was previously only used for COAX Provisioning.
- Implemented an OpenTelemetry stack in Kubernetes to add tracing and better logging to multiple projects.
- Created a Jenkins job to run JUnit tests daily and send the results to a Teams channel. This allowed the team to verify that newly implemented fields were working correctly.
- Created a suite of Python scripts to analyze multiple database tables in the AS400 and export the results to Microsoft Excel.

Gracenote, Inc. **May 2022 - Sept 2024**

Software Engineer *Remote*

- Refactored software modules to be more efficient by implementing design patterns that promote code reusability and maintainability.
- Led an effort to upgrade from Java 8 to Java 17 while maintaining high code quality standards.
- Designed and implemented a CI/CD pipeline that reduced deployment time by 40%, increasing the efficiency of the software delivery process.
- Adopted Docker containerization that allowed software to be tested locally cutting testing time down 85%.
- Automated infrastructure provisioning using Ansible, Terraform, and Terragrunt; significantly reducing manual configuration errors and deployment time.
- Led migration efforts between Github to Gitlab, ensuring a smooth transition for all team members and minimizing disruptions to ongoing projects.
- Conducted regular code reviews to maintain high coding standards and improve overall software quality across the team.

Saab Inc. **May 2018 - May 2022**

Software Engineer *Syracuse, NY*

- Implemented various features for a target processor, whose primary purpose was tracking airplanes and publishing data upstream, utilizing C/C++.
- Developed diagnostic tools in MATLAB for analyzing data being output by the system.
- Frequent use and management of Linux systems, as well as working with Kernel-based Virtual Machines (KVM).
- Designed and developed scripts to automate deployment actions done on-site such as installation of software, creating archives and backing up configurations.
- Created automated regression tests using Ansible playbooks for validating system requirements.

EDUCATION

Clarkson University **2018**

B.S. in Computer Engineering with a Minor in Software Engineering *Potsdam, NY*

SKILLS & INTERESTS

- ***Advanced:*** Java, Spring Boot, C, Typescript, Javascript, Bash, Python, Docker, Linux, Ansible, Terraform, Terragrunt, Postgres, Git, Jira, Github, GitLab, Jenkins, VS Code, Eclipse, Unraid, AWS, Microsoft Office
- ***Intermediate:*** IBM AS400, C++, Dart, C#, MATLAB, MongoDB, Subversion, Postman, Kubernetes
- ***Basic:*** HTML, CSS, PHP, Perl
- ***Interests*:** 3D Printing, Home Lab, Smart Home Automation, Philadelphia sports teams, Tennis, Golf, Cornhole
